

WHONET Software Minimum Requirements

Updated 2016/01/07

Installation Server:

OS: XP, Windows Server 2008+, Win 7, 8, 8.1, 10

- Any windows OS with the minimum **.NET version** should be capable of hosting the application.

-This website must be hosted as a 32 bit process for software driver compatibility. This is only relevant for 64 bit operating systems.

Hard Disk: Application size is approximately 65 MB. Allow an additional 2 GB for data storage.

RAM: Minimum of 512 MB

CPU: Minimum Pentium 4 (or equivalent) - 32 or 64 bit.

.NET framework: 3.5 Minimum

Server Software: Our package includes a light-weight, free web-server (UltiDev Web Server Pro). Alternatively, any server which is capable of hosting ASP.NET web applications may also be used. Examples include IIS, and IIS Express. These alternatives are generally more difficult to setup, but may provide performance benefits useful for many-user scenarios.

Client Computer (if hosted remotely):

The user will access the system through a web browser. Javascript must be enabled.

If the software was installed on a remote server no setup is required on the user's machine other than creating a bookmark to the system login page.

Preferred Browser: Google Chrome (IE versions have been found to have display issues)

OS: Windows XP or later, Mac – 32 or 64 bit, Linux.

RAM: Minimum 256 MB

CPU: Minimum Pentium 4 (or equivalent) - 32 or 64 bit.
