

WHONET Web Software Minimum Requirements

Updated 2018/06/05

Installation Server:

OS: XP, Windows Server 2008+, Win 7, 8, 8.1, 10

- Any windows OS with the minimum **.NET version (4.5)** should be capable of hosting the application.
- This website must be hosted as a 32-bit process for software driver compatibility. This is only relevant for 64-bit operating systems.

Hard Disk: Application size is approximately 65 MB. Allow an additional 2 GB for data storage.

RAM: Minimum of 1024 MB

CPU: Minimum Pentium 4 (or equivalent) - 32 or 64 bit.

.NET framework: 4.5

Server Software: Our package includes a light-weight, free web-server (UltiDev Web Server Pro).

- Alternatively, any server which is capable of hosting **ASP.NET** web applications may also be used. Examples include **IIS**, and **IIS Express**. These alternatives are generally more difficult to setup but may provide performance benefits in multi-user scenarios.

Client Computer (if hosted remotely):

The user will access the system through a web browser. JavaScript must be enabled.

If the software was installed on a remote server, no setup is required on the user's machine other than creating a bookmark to the system login page.

Preferred Browser: Google Chrome

- IE versions have been found to have display issues
